Subject: Preliminary draft TMDL

Attached is a revised version of the preliminary draft TMDL as per our schedule. I have made many revisions reflecting comments received from you all and from the public work shops. However, the document does not completely address issues raised by the federal action agencies. These issues are being discussed by the Federal Execs and possibly by a Federal Policy Forum in DC. So we may be suggesting new changes in the future but there is more than enough here to keep you busy and keep us moving toward our Dec 13, 2002 date for issuance of the draft. I redlined all (I hope) of the sections I changed. A lot of the changes are aimed at providing a better understanding of the water quality improvement process and the role of this TMDL, the implementation plan and possibly use attainability analyses down the road. Substantive changes include limiting the TMDL to the times that the river is impaired for temperature, seasonal allocations, and allocations to Wells, Rocky Reach, Rock Island, Priest Rapids and The Dalles that they can meet now.

The figures will come separately. If you can't open the figures I will try to get them on the web for downloading.
